

FOR IMMEDIATE RELEASE

TEAM Informatics and Kapow Software Announce Partnership

Automate and Simplify Content Migration to Oracle ECM

ARDEN HILLS, MINNESOTA — April 19, 2011 — TEAM Informatics, Inc. and Kapow Software announced that they have entered into a strategic partnership to deliver Oracle ECM content migration solutions. TEAM is a leading enterprise software products and systems integration firm and recognized expert in Oracle Enterprise 2.0 and Google Search technology. Kapow Software is the leader in automated content migration for all major Web Content Management systems. Together, TEAM and Kapow bring greater accuracy, increased efficiency, and reduced risk to Oracle ECM data and content migration projects.

Doug Thompson, EVP of Global Business Development at TEAM Informatics, Inc. states, “Our partnership with Kapow Software is strategic to TEAM’s business of serving customers in the ECM space. Many of our client implementations require data migration. Whether migrating to or from Oracle UCM or Microsoft SharePoint or porting data from legacy systems, Kapow Katalyst™ provides our team with reliability and efficiency in the process while reducing risk to our client timelines. The team at Kapow is supportive of our engagement model and flexible to our clients’ needs.”

Kapow Software's revolutionary browser-based data integration approach cost effectively delivers the most accurate data available precisely where and when it is needed. Based on this approach, Kapow Katalyst™ is the first data integration platform specifically designed for rapid delivery of data to any application on any device. It automatically extracts data from virtually any source on the web, across the enterprise, or in the cloud — without requiring those sources to have published APIs. After extraction, Katalyst applies business rules to transform the data to make it more useful, integrates the data with other systems to ensure its completeness, and then migrates the data to any target destination, including mobile devices.

TEAM and Kapow Software are working together to create enterprise-level content management migration solutions that address public-facing sites, intranets, corporate e-libraries, and document libraries as well as entire enterprise solutions. Kapow Software improves the speed and accuracy of content migrations to and from websites and Web Content Management systems without disruptive content freezes.

“Kapow Software’s partnership with TEAM Informatics offers enterprise customers an effortless, automated migration path to ECM without recourse to in-house expertise and irrespective of the variety of data sources or delivery points,” said Rory Byrne, VP of Business Development for Kapow Software. “Our browser-based data integration platform is a vastly more efficient way to perform content migrations to ECM. TEAM shares our commitment to leveraging innovative technology to address customer needs.”

About TEAM Informatics, Inc.

TEAM Informatics, Inc. (www.teaminformatics.com) is a Minnesota-based software products and systems integration firm with a global customer base. TEAM was formed over 10 years ago and has experienced a 75% compounded annual growth rate. The company is privately held by its employees.

TEAM is a global member of the Oracle Partner Network and Oracle Software Reseller, specializing in areas such as portal and enterprise content management. Offerings include expert professional services, managed services such as support and data center hosting, and a growing set of ECM-related products. In addition, TEAM is a Google Enterprise Partner and Reseller for the Google Search technologies. TEAM has developed and markets a productized Connector that interconnects Oracle Universal Content Management with the Google Search Appliance. The company also partners with other leading technology and solution providers including Kofax (Global Partner Program) for content capture software and WAND DataFacet for precision search and classification, among others.

About Kapow Software

Kapow Software (www.kapowsoftware.com) is the leader in browser-based data integration for rapid delivery of data to any application and on any device. The Kapow Katalyst™ Platform, with its purpose-built extraction browser, automatically extracts, transforms, integrates and migrates data from virtually any source on the web, in the cloud or across the enterprise, to virtually anywhere, including mobile devices, without requiring APIs. With Kapow, customers can deliver data projects as much as 90 percent faster and 80 percent cheaper than traditional methods, with 100 percent data accuracy. More than 500 customers, including AT&T, Audi, Intel, Morgan Stanley, Vodafone and dozens of federal agencies rely on Kapow for data syndication, mobile-enablement, cloud and web app integration, content migration, business intelligence, terrorism tracking, comparison pricing – and much more.
