# GSA WebCenter Content Connector Version 3.5.2

The GSA Connector by TEAM enables the Google Search Appliance (GSA) to index and serve content stored in WebCenter Content. With the connector, the algorithms that have been tuned with billions of daily queries on google.com to deliver highly relevant search results can also be applied to WebCenter Content.

Now with version 3.5.2, the GSA Connector by TEAM added more functionality of the GSA within the WebCenter Content interface. Now search efficiently with suggested searches, document previews, dynamic navigation, and much more without leaving the WebCenter Content interface.

## Benefits

- **Scalable and Redundant** - Supports enterprise deployments that include clustered environments with multiple GSA Connectors, Google Search Appliances, and WebCenter Content instances.
- **Simple and Productive** - Key GSA features such as: dynamic navigation, document preview, key match, query suggestions, and automatic spell-check make searching fast and intuitive.
- **Flexible Execution** - Expose the GSA search in WebCenter Content, WebCenter Portal, and other applications using the included APIs.
- **Federated Search** - The GSA provides federated search results for all your enterprise content sources including WebCenter Content, Sites Studio websites, SharePoint, file systems, and many others.

## New Features in 3.5.2

- Integrated GSA suggestions (Type ahead), document previews, dynamic navigation, and user added results features into the WebCenter Content interface
- Advanced search template provided for searching across metadata in the GSA from the WebCenter Content interface
- Added ECM action links to the GSA search results page in WebCenter Content
- Easily override the WebCenter Content home page search and quick search to perform searches against the GSA
- Support for 11.1.1.8 version of WebCenter Content
- Better support for WebCenter Content ACLs in the GSA
